human body Flashcards and Study Sets | Quizlet

Virtually every cell, tissue, organ, and system in the body is impacted by the circulatory system. This includes the generalized and more specialized functions of transport of materials, capillary exchange, maintaining health by transporting white blood cells and various immunoglobulins (antibodies), hemostasis, regulation of body temperature, and helping to maintain acid-base balance.

20.5 Circulatory Pathways - Anatomy and Physiology

The two-chambered heart has served fish quite well for a very long time, but when amphibians evolved and crawled out onto land, a major evolutionary change took place in their circulatory system ...

Circulatory System III: The Heart - Video & Lesson ...

Jellyfish or sea jellies are the informal common names given to the medusa-phase of certain gelatinous members of the subphylum Medusozoa, a major part of the phylum Cnidaria. Jellyfish are mainly free-swimming marine animals with umbrella-shaped bells and trailing tentacles, although a few are not mobile, being anchored to the seabed by stalks.

Jellyfish - Wikipedia

Medical Microbiology begins with a review of the immune system, focusing on the body's response to invading microorganisms. Bacteria are then covered, first with a series of chapters presenting the general concepts of bacterial microbiology and then with chapters detailing the major bacterial pathogens of humans. Similar sections cover virology, mycology, and parasitology.

Ozone / ' oʊ z oʊ n /, or trioxygen, is an inorganic molecule with the chemical formula O₃. It is a pale blue gas with a distinctively pungent smell. It is an allotrope of oxygen that is much less stable than the diatomic allotrope O₂, breaking down in the lower atmosphere to O₂ (). Ozone is formed from dioxygen by the action of ultraviolet light (UV) and electrical discharges within the ...
