In mathematics, and more specifically in linear algebra and functional analysis, the kernel (also known as null space or nullspace) of a linear map  $L : V \rightarrow W$  between two vector spaces  $V$  and  $W$ , is the set of all elements  $v$  of  $V$  for which  $L(v) = 0$ , where  $0$  denotes the zero vector in  $W$ .That is, in set-builder notation,  $\text{ker } L = \{v \in V \mid L(v) = 0\}$ .

Geometric algebra is a very convenient representational and computational system for geometry. We firmly believe that it is going to be the way computer science deals with geometrical issues.

Open questions Mathematics is something of an extreme case. In most other sciences, new theories and ideas tend to replace older ones. Hence in most sciences work that was done long ago (exactly how long depending on the particular science) is usually superceded by work done as recently as a few decades ago, or less.

To answer your question as it was posed I would have to say, "No, mathematics is not necessary for programming". However, as other people have suggested in this thread, I believe there is a correlation between understanding mathematics and being able to "think algorithmically".

Mathematics - Mathematics in the 19th century: Most of the powerful abstract mathematical theories in use today originated in the 19th century, so any historical account of the period should be supplemented by reference to detailed treatments of these topics. Yet mathematics grew so much during this period that any account must necessarily be selective.

(2005-07-15) The Lorentz Force The Lorentz force on a test particle defines the electromagnetic field(s).. The expression of the Lorentz force introduced here defines dynamically the fields which are governed by Maxwell's equations, as presented further down. Neither of these two statements is a logical consequence of the other.
