

## *Unsaturated Hydrocarbons Study Guide*

### **Unsaturated Hydrocarbons Study Guide**

Hydrocarbons are compounds that only consist of the elements hydrogen and carbon. In this lesson, we will focus on one type of hydrocarbon: unsaturated hydrocarbons, and its three types - alkenes

1. Introduction. Petroleum hydrocarbons are important energy resource and a raw material for various industries. Increasing demand for petroleum products in day to day life may cause their scarcity and increase their cost as suitable alternatives are still not found (Varjani et al., 2015, Varjani and Upasani, 2016b). Petroleum hydrocarbon pollutants are recalcitrant compounds and are classified ...

Ethylbenzene is an organic compound with the formula  $C_6H_5CH_2CH_3$ . It is a highly flammable, colorless liquid with an odor similar to that of gasoline. This monocyclic aromatic hydrocarbon is important in the petrochemical industry as an intermediate in the production of styrene, the precursor to polystyrene, a common plastic material. In 2012, more than 99% of ethylbenzene produced was ...

At PN, we talk a lot about “good fats”, such as omega-3 fatty acids from sources like fish and walnuts. But if there are “good fats”, then by definition there must be “bad fats”. The good news is that because most bad fats are created from industrial food processing, it's difficult to get excessive amounts of bad fat from whole, unprocessed foods.

Petroleum (/ p ə ' t r oʊ l i ə m /) is a naturally occurring, yellowish-black liquid found in geological formations beneath the Earth's surface. It is commonly refined into various types of fuels. Components of petroleum are separated using a technique called fractional distillation, i.e. separation of a liquid mixture into fractions differing in boiling point by means of distillation ...
